Are you a **bad** Flutter Developer?

02

This is a **test** to find out who is a bad flutter developer.
Lets find them out!

Swipe →

After swiping right, You will find some **issues** with the bad flutter developer. Lets **learn** from their mistakes.

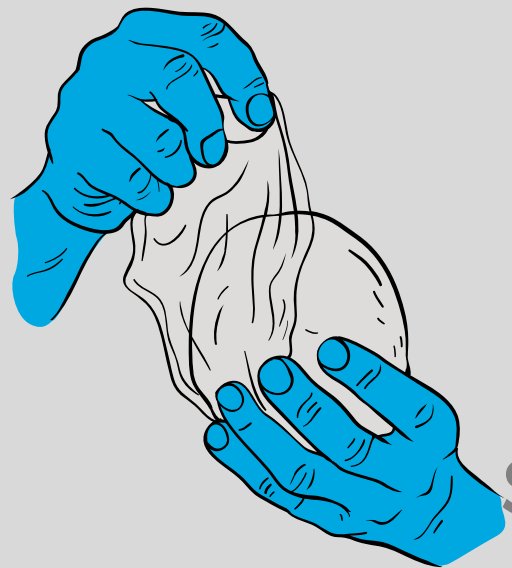
0.Undartistic

A bad flutter developer always ignores the core fundamental,that is "DART" itself. Never ever ignore the power of using the native dart features while building your app. Learn dart more than basics. It is a powerful and handy language, Use it wisely.

Swipe →

1.Antimodel

We should always wrap the dynamic data that we will be receiving from any API or services like Supabase, Appwrite, Firebase in a data model. You can use data properties directly if you got only 1-2 fields. But in case of heavy data, Wrap the dynamic fields under a wrapper.



Swipe →

2.Disbackend

Database, Storage, Server? What's that? Well dont this is the prime sign of a bad flutter developer. Flutter is a UI framework and this doesnt mean that you should just start building user interfaces all the time. Explore the backend side of technology. Explore Supabase/Firebase. Start taking deep dive into custom backend.

Swipe

3.Irrationalfolder

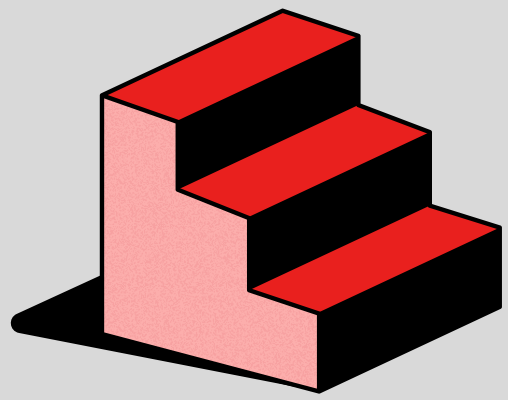
You should have a proper folder structure. Even if you are building a todo list. Make a clean and understandable folder directory. If your project starts getting bigger, It will be almost impossible to find out the right file you need over task. So build a proper folder structure before starting any project.

Swipe →

4.!Architecture

Use a proper architecture! You need to manage the components of your app wisely. So follow :

- MVC (Model — View — Controller)
- MVP (Model — View — Presenter)
- MVVM (Model — View — ViewModel)



Yes, I am a **Freelancer**!

DM to **hire** me as a **Developer**
for your next project
